Eddy Stephens
CIO, Infirmary Health
Project Sponsor

Steven Travers
CEO, Travers Consulting
Project Mentor

CIS 497 - Senior Project - Spring 2019

Our project is to develop a support chatbot application using IBM supplied source code and IBM's Watson Assistant software for Infirmary Health employees. This chatbot will be embedded into their Java-based website. The project will help reduce the number of repeat calls regarding the same problems to the Infirmary Health help desk. It will take on simple tasks such as resetting passwords and setting up new department emails so that the help desk can take on more complicated tasks.

Tyler Washington
Information Systems

"I am planning on furthering my career as an IT Technician, and I like to live an active lifestlye."

Brenton Pugh
Information Systems

"I am aiming to be a Software Developer in my future career and like most young men in our generation I love video games."

Benjamin Simpson
Information Systems

"I am hoping to do Systems Analytics later in life. Cat and tattoo enthusaist."
